

SUBLUXATION!

When your spine is subluxated it causes many things to happen and many more important things to not happen! A subluxation causes weakness and imbalance. The way the body deals with that instability is by laying down more bone (Wolf's Law), and thus, bone spurs are created. One can find subluxations causing an inability to digest, see correctly and even hear correctly. One can find their healing time begin to slow. Subluxation can even cause the canals in children's ears to not slant and drain correctly! We do not have time to allow our families to remain unchecked!
